

better by design

ANKA is the best fitting for **sandy** and **peaty** soils where ground movement can place the line and fitting under considerable stress

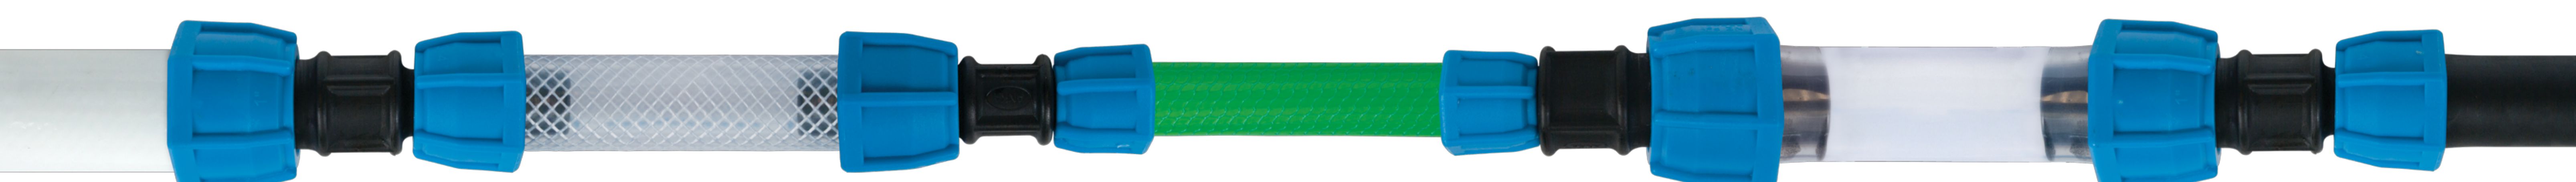

- 1 The **BLUE NUT** is captive, so it stays on the fitting - can't be lost
- 2 Impact resistant high grade glass fibre reinforced nylon - extremely robust and
- 3 Floating **BLUE NUT** design with no external threads on the body of the fitting (which are prone to binding up with sand and dirt)
- 4 **PIPE SEALS ON BARBS**
- 5 Incredibly strong gripping ridges for tightening with a wrench
- 6 User friendly **BLUE NUT** design for hand tightening
- 7 Internal taper allows the **BLUE NUT** to ride up and over the pipe. The nut teeth grip onto the pipe and force it down onto the fitting barbs to create an extremely secure fit
- 8 Multiple bite marks for better grip
